Professional Summary

Software Engineer specializing in AI-powered platforms and scalable backend systems with hands-on experience building intelligent products processing millions of records. Proven ability to architect high-performance solutions that combine modern software engineering, semantic search, and automation to deliver measurable business value.

Education

B.Tech in Information Technology

2022 – 2026

Ajay Kumar Garg Engineering College, Ghaziabad

Experience

Software Developer Intern – Loam IT Solutions Pvt Ltd

Mar 2026 – Present

- Architected and developed an end-to-end **research intelligence platform** using **Django REST Framework, MongoDB, React, and BigQuery**, integrating data from FDA PMA, FDA 510(k), FDA Drugs, PubMed, ClinicalTrials.gov, Google Patents, and company intelligence sources.
- Engineered scalable **ETL and ingestion pipelines** that collected, transformed, and enriched **1M+ biomedical, regulatory, patent, and company records**, converting fragmented public data into investment-grade research datasets.
- Designed high-performance backend services with optimized indexing, caching, and retrieval strategies, enabling **millisecond-level semantic search** across large-scale structured and unstructured datasets.
- Architected an AI-powered **semantic search and intelligence layer** using OpenAI embeddings, entity normalization, intelligent retrieval, and insight extraction workflows, supporting investment research and future **RAG-based knowledge discovery** systems.

Software Developer Intern – LiangTuang Technologies Pvt Ltd

Jun 2025 – Aug 2025

- Built an AI-powered Resume ETL Pipeline using Flask and MySQL, integrated OpenAI API to extract structured data from PDF, DOCX, and TXT resumes with high accuracy.
- Developed a scalable admin dashboard enabling resume review, analytics, and template-based resume generation; reduced manual screening time by 80%.
- Implemented Selenium and Selenium Wire pipelines to scrape 5000+ job listings with metadata used for internal AI/ML dataset creation.

Projects

Real-Time Chat App

[Live]

- Built a real time chat application with private/group messaging, typing indicators, notifications.
- Designed a scalable admin panel for chat/user management, enhancing administrative control and usability.

Tech: React, Node.js, Express, MongoDB, Redux Toolkit, Socket.IO, MUI

Prompt Enhancer – Chrome Extension

[Live]

- Developed a Chrome Extension (Manifest V3) that enhances ChatGPT prompts using OpenAI APIs to generate clearer and more context-rich instructions.
- Built browser-side workflows using Chrome Extension APIs, JavaScript, and content scripts to process prompts and inject optimized responses in real time.

Skills

Languages: Python, JavaScript, TypeScript, Java, SQL

Backend: Django, Django REST Framework, FastAPI, Node.js, Express.js, REST APIs

Frontend: React.js, HTML5, CSS, Redux Toolkit, Tailwind CSS

Databases: MongoDB, PostgreSQL, MySQL

AI/LLMs: OpenAI API, Gemini API, Semantic Search, Embeddings, Prompt Engineering, Structured Outputs, Async AI Workflows, LangChain (Learning), LangGraph (Learning), RAG (Exploring)

Tools: Docker, Git, Linux, Postman, Selenium

Certifications

Python Programming 04 – Infosys Springboard

[Link]

Learned file handling, GUI basics, networking, and Python standard libraries.
